

ABSTRACT

[0062] In the case of a method for the purpose of adhering windowpanes with a frame that exhibits sealing lips and in which, after establishing contact with the windowpane 1, an adhesive 6 is pressed into the hollow space 5 formed by at least sealing lip 2 and windowpane 1 through openings 4, which are arranged in frame 3, a composite article occurs after hardening. This method is particularly well suited to the production of windows and doors, especially folding windows and folding doors.
